

FABRIC FENCING

Whether you require an affordable single-day solution, or a investment for long-term use, EPS-Doublet has a variety of barrier and crowd control options to suit every application and budget. We offer both rental and purchase options on barricades, and a wide range of color, printing and durability alternatives within our printed fencing line.

STANDARD POLY

This cost effective fence is made of tough woven polyester filament, with a UV stable vinyl coating to resist fading, weakening, stretching and fraying. 150' rolls in Royal Blue, Black, Flo Orange and Kelly Green. Ideal for one or two-color screen printing.

WEFT

Unlike traditional printed outdoor fabrics, AirFlo fencing will not suffer from rough treatment or inclement weather, and will not fade as a result of extended exposure to the sun. The construction of AirFlo allows it to easily affix to barricades or fencing panels. It may be used year round for branding, to cordon off areas under construction or maintenance, or to neatly screen off storage areas. AirFlo can be secured with cable ties, which easily loop through the printed fabric. When striking at an event, there's no need to handle AirFlo with kid gloves – it won't scuff or tear. And if it gets dirty, simply hose it down. Fabric may be printed up to 4' high on a continuous roll.
